

Providius offers cutting-edge solutions that passively analyze both the IT and the broadcast side of operations, providing a clear and concise picture of your systems in real-time. The unique combination of network telemetry and media analysis on a single dashboard is what sets Providius apart, making us the trusted partner of numerous organizations worldwide.

Broadcast Media Guard (BMG)

The BMG can acquire, decode, and analyze a wide variety of media flows across multiple high-capacity IP interfaces (up to 100Gb/s) simultaneously.

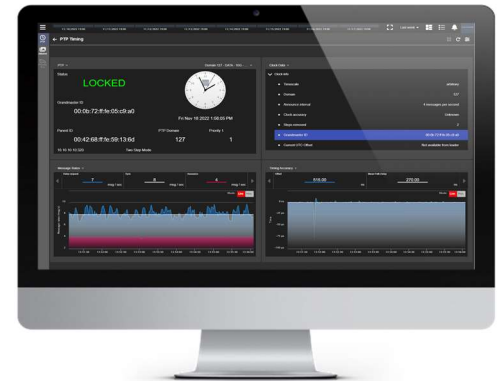

- Media analysis is critical as it enables the measurement and monitoring of the quality and integrity of IP media. This is crucial for ensuring that the delivered content is of the highest possible quality and is free of errors or disruptions.
- Acquire, decode, and analyze a wide variety of media flows (uncompressed and compressed) across multiple high-capacity IP interfaces concurrently.
- BMG is an indispensable and reliable software for Engineering, Operations, and System Integration

BMG PTP Analyzer Dashboard

Key Features

- ✓ Zero-footprint software that provides precision network packet timing analysis
- ✓ Simultaneous decoding and monitoring of multiple media types
- ✓ 24/7 real-time monitoring, capable of monitoring by exception notification
- ✓ NMOS IS-04/IS-05 support for network discovery and patch management
- ✓ VM or bare metal deployments accessed anywhere using secure web UI

BROADCAST MEDIA GUARD

Having the right monitoring and visualization technologies in place to proactively identify impairments and service disruption is imperative to the success of the operation. That is why Providius has engineered the BMG to be the 24/7 eyes and ears on your media network.

Features & Benefits

BMG offers an advanced suite of apps and tools to ensure complete coverage for any media network, including:

Telemetry, Capture, Decode, Analyze

Uncompressed Formats

- ST-2022-6 (SDI over IP)
- ST-2022-7 plus path skew
- ST-2110-20/30/40 all parts
- Including:
 - Packet pacing analysis (-21)
 - 32-bit audio decode + analysis (-31)
 - NMOS IS-04/IS-05 compliant
- AES-67
- RAVENNA

Compressed Formats

- MPEG-2 Video
- H.264 Video
- HEVC Video
- JPEG XS Video
- JPEG 2000 Video
- NDI Video*
- SRT*
- MP1-L1 Audio
- AAC Audio
- HE-AAC Audio
- A-52 Audio

Ancillary Data Analysis

- Closed caption decoding (CEA-608/708)
- Loudness monitoring (EBU-R-128/ITU-1770/ATSC A/85)
- DVB Transport Layer Analysis ETR 101 290
- Commercial signaling analysis & logging (ANSI SCTE-35/SCTE-104)

Analysis

24/7
Monitoring

Packet & Timing Characterization

- Packet jitter and inter-packet arrival time (IPAT)
- RTP sequencing
- PTP analysis including lock, GM, BMCA...
- Timing comparison

Visualization and Notification

- Alarm timeline latching and logging
- Audio metering
- Blended telemetry signal compare
- Multi-CODEC mosaic
- Multiuser personalized albums
- Notifications including SNMP, Syslog, and Slackbot
- Time series historical graphing
- Fully open API for 3rd party integration
